**Restriction**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-18, drawn to a method of transferring message between network applications, classified in class 709, subclass 206.

II. Claims 19-21, drawn to specific interface for generating a message for transmitting in network, classified in class 709, subclasses 236, 250.

The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination I as claimed do not require the particulars of the subcombination II as claimed because a conventional packet generator can be used in the invention I. The subcombination II has separate utility such as use of linked containers for forming and transmitting a message.

Art Unit: 2154

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
